

## **BE PROUD OF YOUR BAGS; STAND THEM UP!**

The Weber Stand-Up Bag Carrier offers an alternative to the side table delivery on all model #3, #5 and #7 Weber bag machines. Also, the stand-up bag carrier is an excellent delivery choice on non-Weber machines.

Each bag is delivered in a controlled manner into the bag carrier belts. The bag seam and bottom is pressed and the adhesive allowed to set further as it is transferred around the delivery drum. Then the bag is delivered to the starwheel and each bag delivered to the delivery table. At this point, the bags are standing on end for the bag handler. The bag counter can be set for any number of bags in the count. Bag handlers can easily fan through the bags for inspection of the product.

## **Advantages of the Stand-Up Bag Carrier are:**

1. A long pressing section allows the seam and bottom adhesives to set longer.
2. Bags are delivered standing up to the off-handler/inspector.
3. The front edge of the bag is visible for immediate inspection of misformed bottoms.
4. Each count of bags is easier to handle because a bundle or count of bags is delivered in an organized stack.
5. Batch counts (bags per hand) can be changed "on the fly".
6. The stand-up delivery directly replaces the side table delivery unit.
7. Requires less floor space.
8. Each bag is transferred into the bag carrier belts under complete control. This eliminates jam-ups in the delivery area of the bag machine.
9. The unit is chain driven from the bag machine, eliminating the motor and electrical hook-up.

This feature consists of the main frames, connecting braces, table, pulleys, rollers, belts, and the parts for the delivery of the bag from the bag machine. Also included is the electronic bag counter.

This stand-up bag carrier is retrofittable to Weber machines as well as competitive machinery. The Weber Stand-Up Bag Carrier system offers you another choice with your "non-Weber" machine.
